

# WALK-BEHIND TROWELS B436 | B446 PRO SERIES

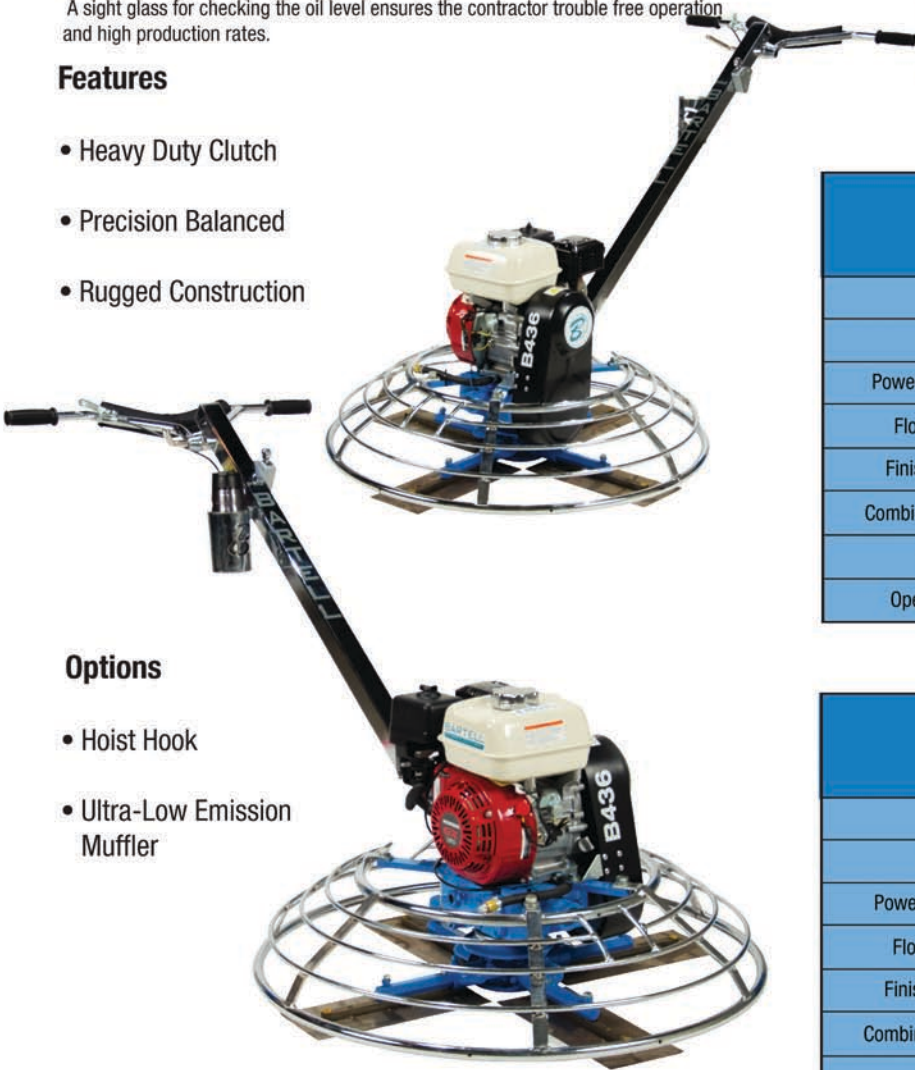

## Strong and durable with a high production rate for even the toughest jobs

The Bartell high performance power trowels provide the contractor with reliable, robust, well-balanced machines suitable for finishing large areas of newly laid concrete.

Available in 36" or 46" variations all trowels are manufactured from heavy gauge steel and jig welded to ensure complete rigidity, strength and long life. Gear boxes are produced from cast aluminum containing heavy duty bronze and steel worm gears. They are also the same gear boxes used on our smaller riders. A sight glass for checking the oil level ensures the contractor trouble free operation and high production rates.

### Features

- Heavy Duty Clutch
- Precision Balanced
- Rugged Construction

### Options

- Hoist Hook
- Ultra-Low Emission Muffler

Additional information on accessories and consumables for our Walk-Behind Trowels is available through our website, or contacting us directly.
